

AddShoppers Social Shopper Login

PrestaShop Installation Instructions

1. Make sure you have the **PSWebServiceLibrary.php** file in your main PrestaShop directory.

If you don't have this file, make a new file called exactly **PSWebServiceLibrary.php**, then copy and paste this file into the one you just created:

<https://raw.githubusercontent.com/PrestaShop/PrestaShop-webservice-lib/master/PSWebServiceLibrary.php>

2. Make sure Webservice is enabled (Preferences > Webservice in your PrestaShop admin).

3. Open up the included **social-login-code.txt** file and copy the code into whatever template you want the sharing buttons to show up (usually your authentication.tpl template).

We've included some default social login buttons at the top of that file, but you can replace those with other social login buttons from your AddShoppers dashboard.

4. Copy the included **create.php** file into your main PrestaShop directory.

5. Open the **create.php** file and configure the 3 variables at the top that need to be set:

1. PS_SHOP_PATH: Your PrestaShop store root path (usually <http://www.domain.com/>)
2. PS_WS_AUTH_KEY: Your PrestaShop Webservice API key
3. ADDSHOPPERS_SECRET_KEY: Your AddShoppers API Secret

Note: You must have AddShoppers Social Analytics app installed in order for this to work. If you're using our PrestaShop module, this is installed for you as long as you have it active!

Otherwise, just copy your Social Analytics code from your AddShoppers dashboard into your footer.tpl theme file.

Errors

Getting a 302/401/400 error: Check www vs non-www in the PrestaShop URL.

Getting a 302 error: add CURLOPT_FOLLOWLOCATION to the get function call in PSWebServiceLibrary.php

Getting a 401 error:

1. check if there is a 302 redirect and make the initial webservice call to that exact URL
2. Try enabling “active mode CGI for PHP” in the PrestaShop webservice settings
